The 625-decision gold standard

The answer key the matcher is validated against: every one of the 625 patient-and-trial decisions, with the verdict, its confidence tier, the single deciding factor, and any inputs still needed. 220 match, 50 not-sure-yet (a required test is missing), and 355 do not fit. Computed directly from the cohort and the rule set — not hand-entered — so it always tracks the engine.

“Not sure yet” (INDETERMINATE) means nothing rules the patient out but a required fact isn't on file, so the tool names the missing test instead of guessing. The deciding factor is the first gate that settled the verdict.
